

Generative AI, ethics, and policies

COMP 4630 | Winter 2026

Charlotte Curtis

Guiding questions for discussion

- What are some ways that AI can be helpful? Harmful?
- What are some ways that AI is used?
 - Axes: intent (malicious <-> innocent), impact (harmful <-> helpful)
- What concerns do you have about AI in general?
 - What about in education, specifically at MRU?
- What would you like to see in an AI policy at MRU?

Case study: vibe coding

Costs* of:

- Voice to text
- Code generation
- Debugging
- at ~3 Wh/request

*Carbon footprint, \$\$, scalability, security, etc

Andrej Karpathy 
@karpathy

There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.
